

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (currently amended) A portable terminal ~~in which~~ having a first housing and a second housing, each of which has a front surface, a back surface which is disposed so as to be opposed to the front surface, and side surfaces which are disposed between the front surface and the back surface, ~~are said first and second housings being joined so as to be~~ foldable through a hinge part, ~~and are foldable~~ in such a manner that the front surface of the first housing and the front surface of the second housing face to each other, comprising:

an image pickup part which shoots a motion picture or a still picture;

a display part which displays ~~the a~~ motion picture or ~~the a~~ still picture which was shot by the image pickup part;

an operation key which is disposed on the back surface of the first or the second housing and is operable after the display part and the image pickup part ~~was~~ have been activated until completion of shooting; and

~~other another~~ operation key which is disposed on ~~other another~~ surface than the back surface.

2. (currently amended) A portable terminal ~~in which~~ having a first housing and a second housing, each of which has a front surface and, a back surface which is disposed so as to be opposed to the front surface, ~~and which said first and second housings being joined so that they~~ are foldable in such a manner that the front

surface of the first housing and the front surface of the second housing face to each other, ~~and are the portable terminal being~~ capable of shooting and displaying a motion picture or a still picture in the state ~~that the first housing and the second housing are folded,~~ comprising:

an image pickup part which shoots a motion picture or a still picture;

a display part which displays ~~the a~~ motion picture or ~~the a~~ still picture which was shot by the image pickup part;

a display part and an shooting time operation key which is disposed on the back surface of the first or the second housing; and

a camera function setting key which is disposed on ~~the a~~ side surface of the first or the second housing.

3. (previously presented) The portable terminal as set forth in Claim 1, wherein the display part is disposed between the operation key and the hinge part.

4. (currently amended) The portable terminal as set forth in Claim 1, wherein ~~the operation key has~~ there are first and second operation keys, and between the first and the second operation keys, a depression or a protrusion is located.

5. (previously presented) The portable terminal as set forth in Claim 4, wherein the depression or the protrusion is a sound hole.

6. (currently amended) The portable terminal as set forth in Claim 1, wherein the operation key ~~becomes~~ is mounted so as to form a depression on the back surface.

7. (previously presented) The portable terminal as set forth in Claim 1, wherein the image pickup part is disposed at the hinge part.

8. (previously presented) The portable terminal as set forth in Claim 7, wherein the image pickup part is configured to be rotatable.

9. (currently amended) A portable terminal ~~in which~~ having a first housing and a second housing, each of which has a front surface, a back surface which is disposed so as to be opposed to the front surface, and side surfaces which are disposed between the front surface and the back surface, ~~are said first and second housings being joined so as to be~~ foldable through a hinge part, ~~and are foldable in such a manner that the front surface of the first housing and the front surface of the second housing face to each other, comprising:~~

a display part which displays a motion picture or a still picture which is shot by an image pickup part on the back surface of the first or the second housing;

first and second operation keys which ~~carries~~ carry out a desired ~~operation~~ operations; and

a depression or a protrusion which is located between the first and ~~the~~ second operation keys.

10. (currently amended) A portable terminal ~~in which~~ having a first housing and a second housing, each of which has a front surface, a back surface which is disposed so as to be opposed to the front surface, and side surfaces which are disposed between the front surface and the back surface, ~~are said first and second housings being joined so as to be~~ foldable through a hinge part, ~~and are foldable in such a~~

manner that the front surface of the first housing and the front surface of the second housing face to each other, comprising:

a display part which displays a motion picture or a still picture which is shot by an image pickup part, said display part being disposed on the back surface of the first or the second housing; and

an operation key which ~~carries~~ is operable to carry out a desired operation,

wherein the operation key is configured so as to become form a depression in the surface in which it is mounted.

11. (currently amended) A portable terminal comprising:

a first housing ~~in which having~~ a first display part is located on a front surface of the first housing, and, on a back surface of the first housing which is opposed to the front surface, there is a second display part and a first operation part which carries out a desired operation ~~are located, and a second display part is located between a hinge part and the first operation part;~~ and

a second housing ~~in which and~~ a second operation part, which carries out a desired operation is located on a front surface of the second housing;

wherein said a first housing and a said second housing are ~~configured joined~~ so as to be foldable through a hinge part, in such a manner that the front surface of the first housing and the front surface of the second housing face to each other, and said second display part is located on said first housing between said hinge part and said first operation part.

12. (currently amended) The portable terminal as set forth in Claim 11, wherein an image pickup part which shoots a motion picture or a still picture is located at the

hinge part, and ~~the~~a motion picture or ~~the~~a still picture which was shot by use of the image pickup part can be displayed on any one of the first display part or the second display part.

13. (previously presented) The portable terminal as set forth in Claim 12, wherein the image pickup part is configured to be rotatable.

14. (currently amended) A portable terminal ~~in which~~having a first housing and a second housing, each of which has a front surface, a back surface which is disposed so as to be opposed to the front surface, and side surfaces which are disposed between the front surface and the back surface, ~~are~~said first and second housings being joined so as to be foldable through a hinge part, ~~and are foldable~~ in such a manner that the front surface of the first housing and the front surface of the second housing face ~~to~~ each other, comprising:

a first display part which is located on the front surface of the first housing;

a second display part which is located on the back surface of the first housing;

and

a storage part which stores information which associates a first display screen which is displayed on the first display part with a second display screen which is displayed on the second display part.

15. (currently amended) The portable terminal as set forth in Claim 14, wherein, ~~in case that~~when the first and second housings in a folded state ~~is~~are changed to an ~~opened~~open state, on the basis of ~~the~~stored information, a display is switched from

the second display screen which is displayed on the second display part to the first display screen which is displayed on the first display part.

16. (previously presented) The portable terminal as set forth in Claim 14, wherein the first display screen is different from the second display screen.

17. (currently amended) A portable terminal ~~in which~~ having a first housing and a second housing, each of which has a front surface, a back surface which is disposed so as to be opposed to the front surface, and side surfaces which are disposed between the front surface and the back surface, ~~are said first and second housings being joined so as to be foldable through a hinge part, and are foldable in such a manner that the front surface of the first housing and the front surface of the second housing face to each other, comprising:~~

a first display part which is located on the front surface of the first housing;

a second display part which is located on the back surface of the first housing;

and

a storage part which stores information which associates a first display screen which is displayed on the first display part with a second display screen which is displayed on the second display part,

wherein, in case ~~that~~ the second display screen is displayed on the second display part when the first and second housings are in the folded state, ~~when a folded state~~ and the disposition of the first and second housings is changed to an ~~opened~~ open state, on the basis of the stored information ~~of in~~ the storage part, a display is switched from the second display screen which is displayed on the second display part to the first display screen which is displayed on the first display part.
